

# Lucy (Xinlu) Zhang

Adelaide, South Australia

✉ [lucyxinluzhang@gmail.com](mailto:lucyxinluzhang@gmail.com) • [Portfolio](#), [LinkedIn](#), [GitHub](#)

Master of Information Technology (Flinders University, GPA 6.5/7.0) with hands-on Java, Python, JavaScript and TypeScript development across both solo products and a multinational Agile team project. Owns systems end to end: data modelling, API design, automated testing, and deployment, including a role-based-access legal platform with 37 automated tests, a deployed multilingual product with row-level security, and a payroll system built alongside a PM and business analysts. Deliberate and test-driven by habit - personally designed 60 unit tests on one project and caught 3 logic defects a casual test pass would have missed - and uses Claude Code as one part of that workflow, not a substitute for it. Full-time work rights in Australia, available now.

## Core Competencies

---

- **Object-oriented development:** Java (primary), Python, JavaScript/TypeScript; OOP design, data structures, modular architecture across independent and team projects.
- **Databases:** PostgreSQL, TiDB/MySQL, MariaDB (relational); DynamoDB (NoSQL) via an AWS Lambda pipeline; JPQL/SQL query design, schema and constraint design.
- **Full-stack delivery:** Spring Boot REST APIs paired with React/TypeScript frontends; owns products from data model through to a live, deployed system.
- **Testing and defect-hunting:** JUnit 5, MockMvc, black-box and boundary-value testing. Personally designed 60 JUnit 5 tests on one project and independently found 3 logic defects invisible to casual testing: inconsistent substring matching, a case-sensitivity bug in uniqueness checks, and an incomplete equals/hashCode implementation silently overwriting records.
- **Team and independent delivery:** Backend developer on an 11-person multinational Agile team clarifying requirements directly with a PM and BAs; also ships solo end-to-end products through to a public GitHub repository and live demo.

## Projects

---

- **Java 21, Spring Boot, Spring Security, PostgreSQL, Docker** **Individual project**  
*CaseFlow Ops: Legal Workflow Platform* *Jul 2026-Present*
  - Built the Java/Spring Boot backend for secure legal-matter workflows, implementing JWT authentication and service-layer role- and relationship-based authorisation across client, case and staff-assignment APIs.
  - Delivered documented vertical slices with Flyway-managed PostgreSQL, transactional data-integrity controls and 37 JUnit/MockMvc tests, using GitHub pull requests and CI quality gates.
  - [GitHub repository](#)
- **TypeScript, React, Supabase, PostgreSQL, Cloudflare Workers** **Individual product**  
*StitchFlow: Multilingual Craft Workflow Platform* *Jul 2026-Present*
  - Evolved a local-first prototype into a deployed product with Google/email authentication, owner-only PostgreSQL row-level security, private image storage and cross-device sync, plus an explicit migration flow that never silently overwrites local data.
  - Designed a typed Project-Section-Part-Row domain model with stitch-count checks that flag mismatches and mixed US/UK/Japanese terminology.
  - [Live demo](#) | [Video demo](#)
- **Java 21, Spring Boot, React, TiDB/MySQL, Docker** **Individual project**  
*Surfboard Rental Management System* *Jan 2026-Jun 2026*
  - Owned the full lifecycle from data modelling and REST API design through to a Dockerised backend deployed on Render with a Vercel frontend.
  - Applied JPQL date-overlap logic to prevent double-booking and centralised exception handling for consistent error responses.
  - [Live demo](#) | [GitHub repository](#)

- **Java, Spring Boot, MySQL, Azure DevOps, Postman** **11-person multinational Agile team project**  
*Workforce Time Management System* *Mar 2026-Jun 2026*
  - Worked as a backend developer alongside a PM, BAs, and frontend/backend colleagues, clarifying requirements and business rules directly rather than working from a fixed spec.
  - Implemented salary-history logic preserving historical payroll data; used Azure DevOps to track tasks and defects, and Postman to validate APIs across normal, error and boundary scenarios.
- **Java 17, JUnit 5, Maven** **4-person course project, High Distinction**  
*Fearless Timetable Optimiser* *Apr 2026-Jun 2026*
  - Personally designed and executed 60 JUnit 5 tests covering CSV import, combinatorial search, duplicate data, invalid input and exception boundaries.
  - Independently located 3 logic defects: inconsistent substring matching, a case-sensitivity bug in course-name uniqueness checks, and an incomplete equals/hashCode implementation that silently let records overwrite each other.

## Professional Experience

---

- **Lianyungang Ruikefei Engineering Consulting Co., Ltd.** **Jiangsu, China**  
*Information Technology Intern* *Jun 2024-Sep 2024*
  - Built a lightweight Python tool to clean and standardise Excel-exported project data, flagging missing, duplicated or inconsistent records for review.
  - Maintained user access and data in internal project-management systems supporting engineering design, supervision, cost consulting and tendering workflows.
  - Provided first-line IT support (Windows workstations, user accounts, printers, network connectivity) on-site and remotely for a small engineering consultancy.
- **Coles Group** **Adelaide, South Australia**  
*Grocery Team Member (Casual)* *Jul 2025-Present*
  - Balanced customer service, stock, and replenishment duties in a fast-paced retail environment while completing my degree full-time.

## Education

---

- **Flinders University** **Adelaide, South Australia**  
*Master of Information Technology, GPA: 6.5/7.0* *Oct 2024-Jul 2026*  
 High Distinctions in Computer Programming, Data Engineering, Fundamentals of Artificial Intelligence, Cloud and Distributed Computing, and Software Testing and Quality Assurance.
- **Nanjing Normal University** **Nanjing, Jiangsu, China**  
*Master of Laws* *Sep 2020-Jun 2023*  
 Civil, commercial and IP law; structured research and technical writing.
- **Soochow University** **Suzhou, Jiangsu, China**  
*Bachelor of Arts in Japanese, GPA: 3.8/4.0* *Sep 2015-Jun 2019*  
 Year-long exchange at Waseda University.

## Languages

---

- Mandarin Chinese (native); English (professional working proficiency, IELTS 7.0); Japanese (advanced, JLPT N1).

## Certifications

---

- **AWS Certified Cloud Practitioner**, awarded Apr 2025.

## Honors and Awards

---

- **Flinders University Chancellor's Letter of Commendation**, academic achievement (2025).
